

820 S. Akers, Suite 220 Visalia, CA 93277
Office Number: 559-733-3346

Total Hip Arthroplasty Post-op Instructions:

Wound Care/Bathing:

- You may shower the day of surgery,
- You may remove your bandage the day after surgery (except the Prineo strip that will be directly over your incision; this needs to stay in place until your first post-op appointment). You may get the hip wet, and wash lightly with soap and water.
- **NO SOAKING IN A POOL OR TUB FOR THREE WEEKS.**

Pain Control:

- Pain medication will be called into your pharmacy of choice, the day of your pre-op.
- Please pick up your medication from the pharmacy, and take as prescribed after surgery. The only exception is: it is a good idea to take the narcotics around the clock for the first 24 hours after surgery to prevent yourself from being caught off guard when the numbing medication wears off that was used during surgery.
- Take an over-the-counter anti-inflammatory (Advil, Aleve, Ibuprofen, etc.) for the first 2-4 weeks after surgery to help with inflammation, pain, and swelling. You can discontinue the anti-inflammatory if you have no pain.
- You can take over-the-counter Tylenol for mild/moderate pain.
- Ice the hip for 10-15 minutes, every hour, as needed for swelling.
- Elevate your leg higher than your heart, as much as possible to help with pain and swelling.
- We CAN NOT prescribe anything stronger than what you are prescribed initially.

*Keep in mind surgery recovery is uncomfortable and it is common to be in pain during your recovery. Please see the recommendations above to help with pain relief. *

Blood Clot Prevention:

- You should get up and walk around frequently during the day; at least once every hour or two. This is usually enough to help prevent blood clot formation.
- Take Aspirin 325 mg, 1 tablet daily, for 30 days after surgery.

Activity:

- Put full weight onto your leg, as your pain tolerates after surgery. You may use crutches or a walker as necessary.
- Avoid a lot of activity and sports, at least until your first post-op appointment.
- Do not return to work until instructed to do so, safely.
- It is safest not to drive until your first post-op appointment. If you are no longer taking narcotic medication, and your leg is full strength, it may be okay to start sooner.

Physical Therapy:

- If you go to a rehabilitation facility after surgery, you will be exercising with a physical therapist.
- If you went home after surgery, home health physical therapy will be set up for you.
- You will be given a physical therapy prescription for outpatient sessions at your first post-op appointment.

Follow up appointments:

- Your first post-op appointment will be scheduled at your pre-op visit, but if not, please call 559-733-3346 and speak to Charlotte.

Questions:

- Call 559-733-3346 and ask for Dr. Criner's staff during normal business hours.

Emergencies:

- **If you have emergent questions or concerns that cannot wait until the day, you may dial 559-733-3346; you will get the orthopedic surgeon who is on-call. If it is not Dr. Criner, the surgeon that answers your call will not know who you are, so please be sure to clarify that you are one of Dr. Criner's patients, the surgery that you had, and the date that you had surgery.**
- **It is our office policy not to prescribe medications over the phone. If you need any medication during the night or weekend, you will have to go to the emergency room.**
